

Gap Analysis

Project: Employee Leave Management System

Version: 1.0

Author: Muhammad Hamza

Date: April 2026

Status: Draft

Purpose

This document identifies the gaps between the current as-is leave management process and the required to-be state. Each gap directly drives one or more functional requirements in the Business Requirements Document (D7).

Gap Analysis Table

Ref	Area	As-is problem	Business impact	To-be solution	What needs to be built	Priority
GAP-01	Leave request submission	Employee submits leave request by email to line manager. No system confirmation is sent. Employee has no visibility of request status after submission.	Employees cannot confirm plans or book travel. Request may be lost or overlooked in manager's inbox.	Employee submits request through a digital form. System sends an automatic confirmation to the employee within 60 seconds of submission, including request reference number and expected	Digital leave request form. Automated submission confirmation notification. Request status tracking for employees.	Must have

Ref	Area	As-is problem	Business impact	To-be solution	What needs to be built	Priority
				response time.		
GAP-02	Manager notification and response time	Manager must manually check email for requests. No alert system exists. Average response time is 2–3 days. Manager must cross-reference a separate HR spreadsheet to check leave balance before deciding.	Approval delays prevent employees from confirming plans. Managers working across email and spreadsheet risk making decisions on outdated data.	System sends manager an instant in-app and email notification when a request is submitted. Leave balance is displayed within the notification — no spreadsheet check required. Manager approves or rejects with one click.	Manager notification engine. Leave balance display within approval interface. One-click approve/reject functionality.	Must have
GAP-03	Rejection communication	When a manager rejects a request, the employee is notified by email with no reason provided.	Employees do not understand why requests are rejected. Repeat requests for ineligible leave waste manager time. No record of rejection reason exists.	When a manager rejects a request, they must enter a mandatory rejection reason before submission. System sends employee a notification including the reason and their current	Mandatory rejection reason field. Rejection notification with reason to employee.	Must have

Ref	Area	As-is problem	Business impact	To-be solution	What needs to be built	Priority
				leave balance.		
GAP-04	Leave balance tracking	HR maintains leave balances in a shared spreadsheet. The spreadsheet is updated manually after each approval. There is no version control, access audit, or protection against accidental edits.	Data loss risk. Payroll errors caused by missed or incorrect updates. No single source of truth for leave balances across the organisation.	System maintains a centralised leave balance database. Balance is updated automatically upon manager approval. HR and employees can view real-time balances at any time. All changes are logged with a full audit trail.	Centralised leave balance database. Automated balance deduction on approval. Audit log for all balance changes. Real-time balance view for employees and HR.	Must have
GAP-05	HR reporting	HR has no reporting tool. Leave data is only accessible by manually reviewing the shared spreadsheet. Generating a monthly report requires manual extraction	HR cannot monitor leave trends. Compliance reporting is slow and error prone. Management has no visibility of leave patterns across departments.	System generates monthly leave reports filterable by department, leave type, and date range. Reports are available on demand and exportable to PDF or Excel.	Report generation module with filter by month, year, department. Export to PDF and Excel.	Must have

Ref	Area	As-is problem	Business impact	To-be solution	What needs to be built	Priority
		and formatting.				
GAP-06	Payroll update process	HR manually notifies the payroll department of approved leave at end of month. Payroll team manually adjusts records based on this notification.	Month-end delays mean payroll may be processed before all leave is captured. Manual handoff creates errors and has no audit trail.	System automatically notifies the payroll department when leave is approved. Payroll records are updated in the system in real time. Full audit trail of all payroll-related leave changes is maintained.	Automated payroll notification on approval. Real-time payroll record update. Audit trail for payroll changes.	Should have — version 2

Summary of Gaps by Priority

Priority	Count	Gap references
Must have	5	GAP-01, GAP-02, GAP-03, GAP-04, GAP-05
Should have — version 2	1	GAP-06

Traceability Note

Each gap in this document maps directly to one or more user stories in D5 and one or more functional requirements in D7. GAP-06 (payroll integration) is confirmed out of scope for version 1 in alignment with the project scope defined in D1.
